#### King Street Greenway Extension

## 7<sup>th</sup> Street to Mississippi River

## Back Ground:

One of La Crosse's first neighborhood greenways, King Street currently runs from 22<sup>nd</sup> Street to it terminus at 7<sup>th</sup> Street. There is community interest in continuing the greenway west of 7<sup>th</sup> Street to facilitate a connection to: Downtown La Crosse, Riverside Park and, a multi-use trail along the Mississippi River. We are requesting your expertise and assistance conducting community outreach, followed by design integrating community feedback to extend the neighborhood greenway. The length of the project is 2869 feet, contains 7 intersections and 5 alley intersections. The project corridor is primarily zone Commercial, except a Cameron Park. Within the corridor there is one park, a transit station, a bank, a school, and apartment complex, two hotels, a bar, three restaurants, an Arts Center and a Performing Arts Center. The western terminus of the greenway will join into existing trail along the Mississippi River. Three state highways within the corridor pose a significant barrier to mobility.

## Priorities to be included in final design:

- Innovative green streets treatments that can include: biocells, silva cells, tree wells, traffic circles, curb extensions, other traffic calming designs
- Accommodations for bicycles, pedestrians and people using wheelchairs
- Improved connection to trail along Mississippi that continues north to Riverside Park
- Design and treatment recommendations extend from streets into alleys
- Large format map of entire corridor depicting recommended treatments

# Scope of Work and Deliverables:

- One public engagement online interactive workshop/ charette to design the facility
- Data: pedestrian and bicycle crashes, traffic volumes on crossing roads, turning movements at each intersection
- CAD ready-to-build engineering drawings of all intersection geometry
- CAD engineering drawings of a revised interface to the trail along the Mississippi river
- A second public engagement online meeting to showcase draft design, following this meeting feedback shall be integrated into the final design.
- A third public engagement meeting with business owners in the corridor

- Table of clear recommendations for each intersection
- A table of comments from public meetings
- Final Memo to include engineering ready-to-build intersection geometry drawings, map of the projects
- Executive Summary
- Schedule
