

PETITION TO THE CITY OF LA CROSSE COMMON COUNCIL - July 24, 2024

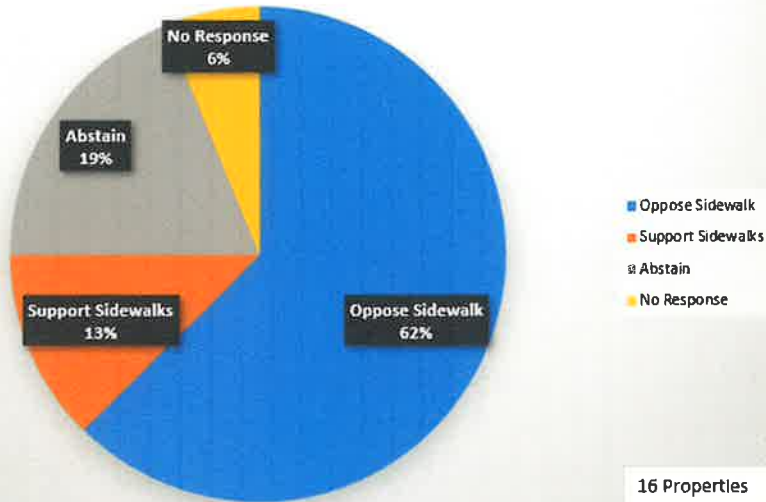

PROPOSED BLUFFSIDE NEIGHBORHOOD SIDEWALK PROJECTS: Farman St, 28th St (including Jackson St), 29th St (including Cliffwood Ln)

Summary of Petition Results:

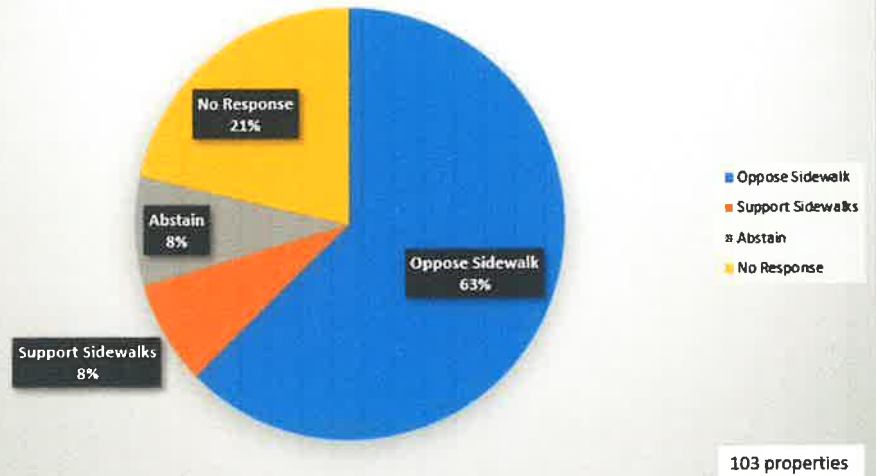

Information was gathered to better inform La Crosse City Council members on how proposed sidewalk projects in the Bluffside Neighborhood are perceived by the citizens who are both directly impacted, and those who live in the properties adjacent (buffer properties). Each household was asked to indicate whether they support or oppose the installations of sidewalks or wish to abstain from electing a choice on this issue. Those results are summarized below for each of the individual projects identified on the engineering draft which was provided by the 7th District Council representative, and for the buffer areas adjacent. In some instances, no contact could be made with any resident of a property after at least 3 separate attempts on different days. Those instances are categorized as “no response” in the summaries below. While results vary within each of the summarized categories, in all cases the majority of residents oppose the proposed sidewalk infill projects identified above. As such, this petition requests that all associated projects identified above be removed from the 2025-2029 Capitol Improvement Budget, prior to the final vote on this budget on August 8, 2024. The 46 pages attached contain the information summarized in the charts below.

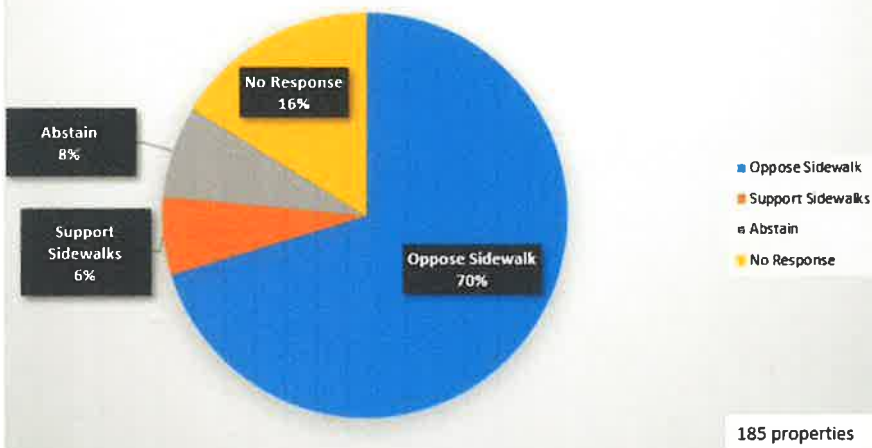

**29th Street Sidewalk Project
(Cliffwood Lane to Cass St)**

**Buffer Zone - All projects
(300 feet from proposed sidewalk projects)**

**All Properties Summary - All 3 Sidewalk Projects
(Farnam St, 28th St, 29th St, Jackson St, Cliffwood Ln, Buffer Zone)**

PETITION TO THE CITY OF LA CROSSE COMMON COUNCIL

Per the proposal as received from our City Council District 7 representative, the City of La Crosse intends to install sidewalks on: Both sides of Farnam St east of the railroad tracks. Both sides of 28th St from Farnam St to Cliffwood Ln. Portions of Jackson St and Cliffwood Ln east of 28th St. 29th St from Cliffwood Ln to Cass St. This proposal has caused many concerns from citizens and property owners in the affected areas, including the following:

1. This proposal would place a significant amount of pavement on land which is **both within and around areas currently designated as flood plain**. Based on the draft drawings of this plan provided, in excess of 40,000 square feet of **green area would be removed** and replaced with concrete, increasing the flooding threat to property owners in this area through additional water runoff. This area has long suffered from flooding and this proposal will only serve to negate some of the mitigations put in place. The City of La Crosse Water Department distributed (June 2024) a mailing encouraging property owners to install rain gardens, rain barrels and other measures to reduce (water) runoff. This proposal is contrary to those goals expressed of the La Crosse Water Utility to reduce runoff.
2. This proposal by the City of La Crosse would place a **perpetual Physical or Financial burden on the property owners** and residents in the affected areas. The citizens in this area have not had sidewalks imposed on them for over 60-years and the affected property owners and residents will be required to maintain the sidewalks during the winter themselves or pay for their maintenance. Failure to do so could result in **fines in excess of \$200** on a typical lot. This would further add to the financial burdens beyond installation costs.
3. The proposal will **deduct from the quality of life the property owners** and residents have enjoyed in the Bluffside neighborhood. It would cause the removal of many existing trees, gardens and green areas which add curb appeal to the neighborhood, and will erode privacy by bringing foot traffic closer to the residences.

Based on these concerns, the property owners and residents of the affected region have expressed their opinion of this proposal as follows.

PETITION TO THE CITY OF LA CROSSE COMMON COUNCIL

Per the proposal as received from our City Council District 7 representative, the City of La Crosse intends to install sidewalks on: Both sides of Farnam St east of the railroad tracks. Both sides of 28th St from Farnam St to Cliffwood Ln. Portions of Jackson St and Cliffwood Ln east of 28th St. 29th St from Cliffwood Ln to Cass St. This proposal has caused many concerns from citizens and property owners in the affected areas, including the following:

1. This proposal would place a significant amount of pavement on land which is **both within and around areas currently designated as flood plain**. Based on the draft drawings of this plan provided, in excess of 40,000 square feet of **green area would be removed** and replaced with concrete, increasing the flooding threat to property owners in this area through additional water runoff. This area has long suffered from flooding and this proposal will only serve to negate some of the mitigations put in place. The City of La Crosse Water Department distributed (June 2024) a mailing encouraging property owners to install rain gardens, rain barrels and other measures to reduce (water) runoff. This proposal is contrary to those goals expressed of the La Crosse Water Utility to reduce runoff.
2. This proposal by the City of La Crosse would place a **perpetual Physical or Financial burden on the property owners** and residents in the affected areas. The citizens in this area have not had sidewalks imposed on them for over 60-years and the affected property owners and residents will be required to maintain the sidewalks during the winter themselves or pay for their maintenance. Failure to do so could result in **fines in excess of \$200** on a typical lot. This would further add to the financial burdens beyond installation costs.
3. The proposal will **detract from the quality of life the property owners** and residents have enjoyed in the Bluffside neighborhood. It would cause the removal of many existing trees, gardens and green areas which add curb appeal to the neighborhood, and will erode privacy by bringing foot traffic closer to the residences.

Based on these concerns, the property owners and residents of the affected region have expressed their opinion of this proposal as follows.

PETITION TO THE CITY OF LA CROSSE COMMON COUNCIL

Per the proposal as received from our City Council District 7 representative, the City of La Crosse intends to install sidewalks on: Both sides of Farnam St east of the railroad tracks. Both sides of 28th St from Farnam St to Cliffwood Ln. Portions of Jackson St and Cliffwood Ln east of 28th St. 29th St from Cliffwood Ln to Cass St. This proposal has caused many concerns from citizens and property owners in the affected areas, including the following:

1. This proposal would place a significant amount of pavement on land which is **both within and around areas currently designated as flood plain**. Based on the draft drawings of this plan provided, in excess of 40,000 square feet of **green area would be removed** and replaced with concrete, increasing the flooding threat to property owners in this area through additional water runoff. This area has long suffered from flooding and this proposal will only serve to negate some of the mitigations put in place. The City of La Crosse Water Department distributed (June 2024) a mailing encouraging property owners to install rain gardens, rain barrels and other measures to reduce (water) runoff. This proposal is contrary to those goals expressed of the La Crosse Water Utility to reduce runoff.
2. This proposal by the City of La Crosse would place a **perpetual Physical or Financial burden on the property owners** and residents in the affected areas. The citizens in this area have not had sidewalks imposed on them for over 60-years and the affected property owners and residents will be required to maintain the sidewalks during the winter themselves or pay for their maintenance. Failure to do so could result in **fines in excess of \$200** on a typical lot. This would further add to the financial burdens beyond installation costs.
3. The proposal will **deduct from the quality of life the property owners** and residents have enjoyed in the Bluffside neighborhood. It would cause the removal of many existing trees, gardens and green areas which add curb appeal to the neighborhood, and will erode privacy by bringing foot traffic closer to the residences.

Based on these concerns, the property owners and residents of the affected region have expressed their opinion of this proposal as follows.

Portions of Jackson St and Cliffwood Ln east of 28th St. 29th St from Cliffwood Ln to Cass St. This proposal has caused many concerns from citizens and property owners in the affected areas, including the following:

1. This proposal would place a significant amount of pavement on land which is **both within and around areas currently designated as flood plain**. Based on the draft drawings of this plan provided, in excess of 40,000 square feet of **green area would be removed** and replaced with concrete, increasing the flooding threat to property owners in this area through additional water runoff. This area has long suffered from flooding and this proposal will only serve to negate some of the mitigations put in place. The City of La Crosse Water Department distributed (June 2024) a mailing encouraging property owners to install rain gardens, rain barrels and other measures to reduce (water) runoff. This proposal is contrary to those goals expressed of the La Crosse Water Utility to reduce runoff.
2. This proposal by the City of La Crosse would place a **perpetual Physical or Financial burden on the property owners** and residents in the affected areas. The citizens in this area have not had sidewalks imposed on them for over 60-years and the affected property owners and residents will be required to maintain the sidewalks during the winter themselves or pay for their maintenance. Failure to do so could result in **fines in excess of \$200** on a typical lot. This would further add to the financial burdens beyond installation costs.
3. The proposal will **deduct from the quality of life the property owners** and residents have enjoyed in the Bluffside neighborhood. It would cause the removal of many existing trees, gardens and green areas which add curb appeal to the neighborhood, and will erode privacy by bringing foot traffic closer to the residences.

Based on these concerns, the property owners and residents of the affected region have expressed their opinion of this proposal as follows.

This area has long suffered from flooding and this proposal will only serve to negate some of the mitigations put in place. The City of La Crosse Water Department distributed (June 2024) a mailing encouraging property owners to install rain gardens, rain barrels and other measures to reduce (water) runoff. This proposal is contrary to those goals expressed of the La Crosse Water Utility to reduce runoff.
2. This proposal by the City of La Crosse would place a **perpetual Physical or Financial burden on the property owners** and residents in the affected areas. The citizens in this area have not had sidewalks imposed on them for over 60-years and the affected property owners and residents will be required to maintain the sidewalks during the winter themselves or pay for their maintenance. Failure to do so could result in **fines in excess of \$200** on a typical lot. This would further add to the financial burdens beyond installation costs.
3. The proposal will **detract from the quality of life the property owners** and residents have enjoyed in the Bluffside neighborhood. It would cause the removal of many existing trees, gardens and green areas which add curb appeal to the neighborhood, and will erode privacy by bringing foot traffic closer to the residences.

Based on these concerns, the property owners and residents of the affected region have expressed their opinion of this proposal as follows.

PETITION TO THE CITY OF LA CROSSE COMMON COUNCIL

Per the proposal as received from our City Council District 7 representative, the City of La Crosse intends to install sidewalks on: Both sides of Farnam St east of the railroad tracks. Both sides of 28th St from Farnam St to Cliffwood Ln. Portions of Jackson St and Cliffwood Ln east of 28th St. 29th St from Cliffwood Ln to Cass St. This proposal has caused many concerns from citizens and property owners in the affected areas, including the following:

1. This proposal would place a significant amount of pavement on land which is **both within and around areas currently designated as flood plain**. Based on the draft drawings of this plan provided, in excess of 40,000 square feet of **green area would be removed** and replaced with concrete, increasing the flooding threat to property owners in this area through additional water runoff. This area has long suffered from flooding and this proposal will only serve to negate some of the mitigations put in place. The City of La Crosse Water Department distributed (June 2024) a mailing encouraging property owners to install rain gardens, rain barrels and other measures to reduce (water) runoff. This proposal is contrary to those goals expressed of the La Crosse Water Utility to reduce runoff.
2. This proposal by the City of La Crosse would place a **perpetual Physical or Financial burden on the property owners** and residents in the affected areas. The citizens in this area have not had sidewalks imposed on them for over 60-years and the affected property owners and residents will be required to maintain the sidewalks during the winter themselves or pay for their maintenance. Failure to do so could result in **fines in excess of \$200** on a typical lot. This would further add to the financial burdens beyond installation costs.
3. The proposal will **deduct from the quality of life the property owners** and residents have enjoyed in the Bluffside neighborhood. It would cause the removal of many existing trees, gardens and green areas which add curb appeal to the neighborhood, and will erode privacy by bringing foot traffic closer to the residences.

Based on these concerns, the property owners and residents of the affected region have expressed their opinion of this proposal as follows.
