

Memorandum

To: Jay Crandall / Engineering Dept. / Board of Public Works

From: Kevin Clements / Replacement Housing Program

Date: 1/9/2020

Re: 2910 23rd St. South / Permission to excavate in new pervious street.

This property was purchased after the new street was installed. Standard procedures are to replace the waste line to the city's main to hopefully alleviate problems for many years.

Waste line:

Per Engineering records; only documentation is lateral connection in 1959, the same age as the main. The main is clay and lined, assuming the lateral to the boulevard is clay also. When the cap & seal was performed, the Inspector found 4" cast iron 16' back from the curb.

Water line:

Per Water Dept records; ¾" copper, installed in 1975, this is acceptable and the curb stop is in the correct property.

This will be Central High School's fall build.
