Re: Proposal for a Geotechnical Evaluation
Proposed Underground Storm Water Treatment System
River Point District Site Development
Copeland Avenue and Causeway Boulevard
La Crosse, Wisconsin

Dear Mr. Tomesh:

Braun Intertec Corporation respectfully submits this proposal to complete a geotechnical evaluation for the underground storm water treatment system for the River Point District project in La Crosse, Wisconsin.

Project Information

Based on preliminary plans, dated June 17, 2020, we understand the project will include development of the former Mobile Oil site for commercial development. This phase of the project includes design and construction of two underground storm water treatment system structures. These structures will be constructed with reinforced concrete that will be 100-ft by 100-ft and 15-ft in height, and 50-ft by 300-ft and 15-ft in height. These structures will be embedded approximately 5 feet below the water table. Settlement for each tank is to be limited to 1 inch total and ½-inch differential.

Site History and Geology

Historically, the site was owned by Mobile Oil and the site is known to have environmentally impacted soil and groundwater. The southern portion of the site was known to be utilized for concrete waste and concrete truck washout and has been described as a concrete monolith. It is possible borings for this phase of the project may encounter this material. Furthermore, the natural geologic materials are expected to consist of alluvial sand soils and organic swamp deposits.

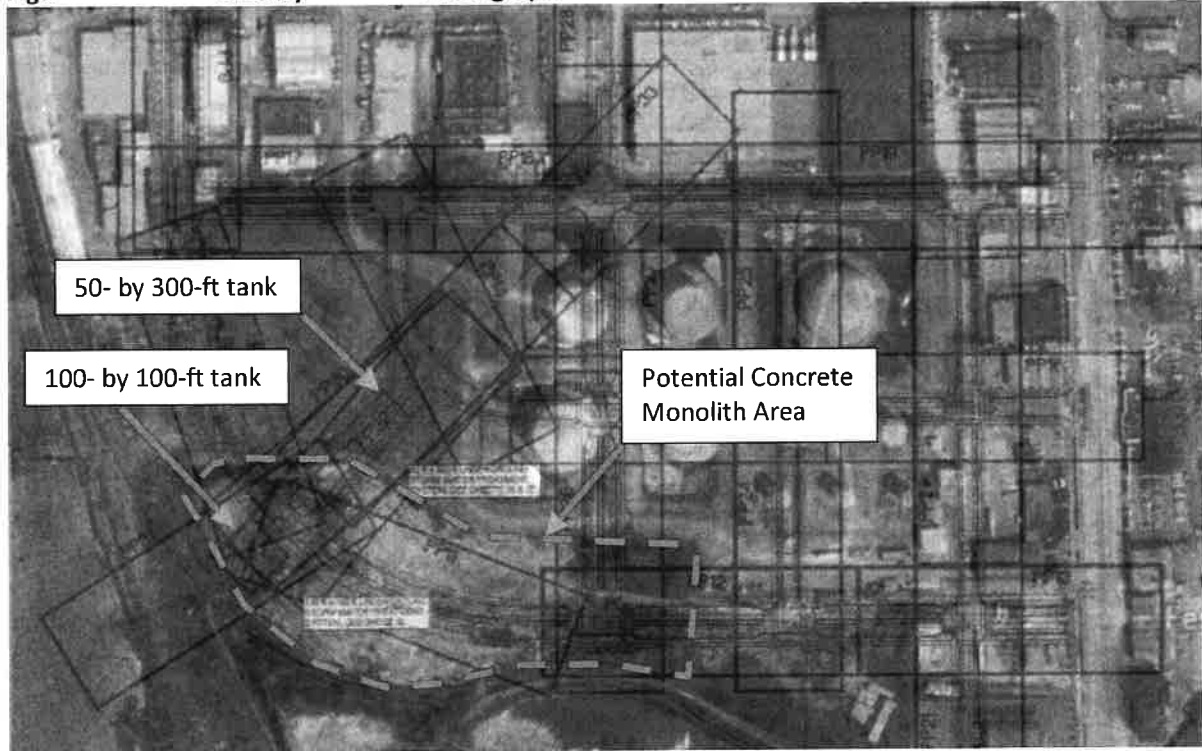

Figure 1. Site Plan overlay on Aerial Photograph

Purpose

The purpose of our geotechnical evaluation will be to characterize subsurface geologic conditions at selected exploration locations, evaluate their impact on the project, and provide geotechnical recommendations for the design and construction of the below grade tanks.

Scope of Services

We propose the following tasks to help achieve the stated purpose. If we encounter unfavorable or unforeseen conditions during the completion of our tasks that lead us to recommend an expanded scope of services, we will contact you to discuss the conditions before resuming our services.

Site Access

Based on aerial photographs, it appears that the site is accessible to an all-terrain vehicle (ATV) drill rig. We assume there will be no cause for delays in accessing the exploration locations.

Depending on access requirements, ground conditions or potential utility conflicts, our field crew may alter the exploration locations from those proposed to facilitate accessibility.

Our drilling activities may also impact the vegetation and may rut the surface to access boring locations. Restoration of vegetation and turf is not part of our scope of services.

Staking

We will stake prospective subsurface exploration locations, as selected by SEH, and obtain surface elevations at those locations using GPS (Global Positioning System) technology. For purposes of linking the GPS data to an appropriate reference, we request that you provide CAD files indicating location/elevation references appropriate for this project or give us contact information for the consultant that might have such information.

Utility Clearance

Prior to drilling or excavating, we will contact Digger's Hotline and arrange for notification of the appropriate utility vendors to mark and clear the exploration locations of public underground utilities. You, or your authorized representative, are responsible to notify us before we begin our work of the presence and location of any underground objects or private utilities that are not the responsibility of public agencies.

Penetration Test Borings

As requested, we will drill nine standard penetration test (SPT) borings for the project. Table 1 provides a summary of the proposed boring locations and depths. We will perform standard penetration tests at 2 1/2-foot vertical intervals to a depth of about 15 feet, and at 5-foot intervals at greater depths.

Table 1. Summary of Proposed Borings*

Boring Number*	Depth (feet)	Boring Number*	Depth (feet)
ST-1	40	ST-6	40
ST-2	100	ST-7	40
ST-3	40	ST-8	40
ST-4	40	ST-9	100
ST-5	100	---	---
Total			540

*Borings that encounter refusal on apparent concrete monolith, the boring will be offset up to 25 feet (horizontally) and will be re-drilled once. If refusal is met on the second (or offset) boring, we will note the refusal depth and move to the next boring.

If the intended boring depths do not extend through unsuitable material, we will extend the borings at least 5 feet into suitable material at greater depths. The additional information will help evaluate such issues as excavation depth, consolidation settlement, and foundation alternatives, among others. If we identify a need for deeper (or additional) borings, we will contact you prior to increasing our total estimated drilled footage and submit a Change Order summarizing the anticipated additional effort and the associated cost, for your review and authorization.

Borehole Abandonment

Wisconsin Administrative Code NR 141.25 requires us to seal any boring greater than 10 feet deep or any boring that intersects the water table. Boreholes greater than 4-inches in diameter that are less than 250 feet deep and have less than 150 feet of standing water may be abandoned using 3/8-inch bentonite chips.

Based on the intended exploration depths, we have made provisions to seal 540 lineal feet of borehole with 3/8-inch bentonite chips and prepare associated Wisconsin borehole abandonment forms.

Sample Review and Laboratory Testing

We will return recovered samples to our laboratory, where a geotechnical engineer will visually classify and log them. To help classify the materials encountered and estimate the engineering properties necessary to our analyses, we have budgeted to perform the laboratory tests presented in Table 2.

Table 2. Laboratory Tests

Test Name	Number of Tests	ASTM Test Method	Purpose
Moisture content	20	D2216	Soil classification, moisture condition, and engineering properties
Atterberg limits	4	D4318	Soil plasticity, shrink/swell potential, engineering parameters, suitability of soils for reuse
Moisture Content & Density	6	D2937	Wet and dry unit weight for use in settlement and bearing capacity analyses
Sieve analysis	4	D1140	Soil classification
Consolidation, one-dimensional	3	D2435	Evaluate settlement characteristics of soils
Percent passing #200 sieve	12	D1140	Soil classification, and evaluate frost susceptibility
Organic content	4	D2974	Evaluate suitability of soils for reuse

Samples that appear to be impacted will be notated on our boring logs and will include color, depth, and potential odor. It is our understanding that additional testing on impacted soil is not requested at this time.

Engineering Analyses

We will use data obtained from the subsurface exploration and laboratory tests to evaluate the subsurface profile and groundwater conditions, and to perform engineering analyses related to structure design and performance. Our analysis will provide recommendations to support the tanks on appropriate foundation systems to keep settlement to less than 1 inch total and ½ inch differential.

Report

We will prepare a report including:

- A CAD sketch showing the exploration locations.
- Logs of the borings describing the materials encountered and presenting the results of our groundwater measurements and laboratory tests.
- A summary of the subsurface profile and groundwater conditions.
- Discussion identifying the subsurface conditions that will impact design and construction.

- Discussion regarding the reuse of on-site materials during construction.
- Recommendations for preparing structure subgrades, and the selection, placement, and compaction of fill.
- Recommendations for the design and construction of below grade structures including buoyancy. We will also provide discussion regarding dewatering. Provide discussion regarding use of pressure relief valves for the tanks.
- Provide recommendations for both shallow and deep foundation systems including recommended axial and uplift capacities and downdrag considerations.
- Provide modulus of subgrade reaction value.
- Provide recommendations for lateral earth pressure for design of below grade tank walls.

We will only submit an electronic copy of our report to you unless you request otherwise. At your request, we can also send the report to additional project team members.

Schedule

We anticipate performing our work according to the following schedule.

- Drill rig mobilization – during the second week in February
- Field exploration – 5 to 6 days on site to complete the work
- Classification and laboratory testing – within 1 week after completion of field exploration
- Preliminary results – within 1 week after completion of field exploration
- Draft report submittal – within about 2 weeks of completion of the field exploration and laboratory testing
- Final report submittal – within 5 days of receiving comments on the draft report

If we cannot complete our proposed scope of services according to this schedule due to circumstances beyond our control, we may need to revise this proposal prior to completing the remaining tasks.

Fees

We will furnish the services described in this proposal for a lump sum fee of **\$29,870**, which includes up to 6 hours of post deliverable consulting time. Additional requests for meetings, consulting or modifications to the report will be billed at a rate of \$130 per hour. Table 3 provides a breakdown of the proposed fees.

Table 3. Proposed Fee Breakdown

Service	Fee
Staking and Utility Clearance	\$995
Snow Removal	\$1,955
Drilling*	\$16,110
Laboratory Testing (as outlined in Table 2 above)	\$4,790
6 hours of Consulting time	\$780
Coordination, Engineering Analysis, and Report	\$5,240
Total	\$29,870

*Additional costs associated with drilling are presented below in **Additional Costs/Fewer Borings** section.

Our work may extend over several invoicing periods. As such, we will submit partial progress invoices for work we perform during each invoicing period.

Additional Borings/Fewer Borings

If the project team elects to increase the number of borings or reduce the number of borings, we will adjust our fees accordingly.

- For borings that extend beyond a depth of 40 feet, we will charge \$22 per foot to a depth of 50 feet.
- For borings that extend beyond a depth of 50 feet, we will charge \$26 per foot to a depth of 80 feet.
- For borings that extend beyond a depth of 80 feet, we will charge \$30 per foot to a depth of 100 feet.

Additional mobilizations to the site will be charged at a cost of \$1,200. If needed, per diem will be charged for our drilling crew at a cost of \$320 per night (split between a two-person crew).

General Remarks

We will be happy to meet with you to discuss our proposed scope of services further and clarify the various scope components.

We appreciate the opportunity to present this proposal to you. Please sign and return a copy to us in its entirety.

We based the proposed fee on the scope of services described and the assumptions that you will authorize our services within 30 days and that other will not delay us beyond our proposed schedule.

We include the Braun Intertec General Conditions, which provide additional terms and are a part of our agreement.

To have questions answered or schedule a time to meet and discuss our approach to this project further, please contact us at 608.781.7277.
