1.2 If any violations occurred, what action was taken to regain compliance?

Disc Filter startup for effluent compliance was delayed by contractor schedule until January 2025 and optimization was delayed until May 2025. These issues were due to trying to dial in the new effluent disc filters. Vendor assistance was weak and it took some time for our staff to figure out the best operational methods.

ACTIONS SET FORTH BY THE GOVERNING BODY OR OWNER RELATING TO SPECIFIC CMAR SECTIONS (Optional for grade A or B. Required for grade C, D, or F):

Influent Flow and Loadings: Grade = F

Due to the plant upgrade and accommodation of new headworks screening equipment, the influent composite sampler was relocated to collect the most representative influent sample. Note this BOD limit/result is based on 1 sample taken/month, CBOD reported daily is withing range. The BOD with multiple sampling locations to compare is higher thus affecting the BOD design limit even though we meet permit limits leaving the WWTP. Although we met our permit "sample point designation", we expected this increase in BOD/TSS loading to happen as the sample point is now ahead of screening equipment. The existing primary sampler
downstream of this influent sampler has remained consistent which leads us to believe the screening process is removing a large portion of BOD/TSS loading and not actually going through the facility. We met with our Basin Engineer about this situation. We are working with a consultant to re-rate the facility.

Effluent Quality: BOD: Grade = A

Effluent Quality: TSS: Grade = A

Effluent Quality: Ammonia: Grade = A

Effluent Quality: Phosphorus: Grade = F

The scheduled completion date for the WWTP upgrade to meet low level phosphorus compliance was due May 2024. Due to COVID product delays the project was delayed almost a full year and start up of effluent disc filters didn't occur until December 2024. Once startup happened it took some time figuring out operations and chemistry of the new system. Vendor assistance was weak and it took time to dial in the chemistry and biology of the new system, once our staff figured out the complex filtration system we were able to meet the low level phosphorus permit limit.
