

# QUICK LOCK

Quick-Lock is an advanced trenchless point repair product, expertly installed by Empire Pipe Services. Featuring a robust stainless steel locking mechanism and a durable single-piece EPDM vulcanized rubber gasket, it delivers long-lasting, leak-proof structural repairs. This versatile solution works as a stand-alone fix or as a pre-lining spot repair, eliminating the need for disruptive digging.

Our skilled technicians use CCTV robotics to guide a wheeled flow-through packer, precisely positioning the Quick-Lock sleeve inside the damaged pipe. Once in place, air pressure expands the sleeve against the pipe wall. Patented stainless steel gear ratchets lock it securely, reinforcing weakened areas and compressing the gasket for a watertight seal.

Quick-Lock offers a fast, effective, and minimally invasive way to restore your pipes, ensuring enhanced performance and durability with minimal hassle.

Sleeve Sizes are Available from 6" to 32" in Circular Pipe Diameter QuickLock is a strictly mechanical point repair system for the inside repair of pipes.
