

Description of project:

I am seeking a permit to replace the roof, walkway, one screen door and deck boards for boathouse #27. The location, size and distance from the shore will not change and will remain in its original form.

Project overview:

1. Replace all roofing of the boathouse due to deteriorating materials. The new roof will be made of metal (same material as current roof) and will not include increasing the size of the boathouse or changing the size of the existing roof in any way.
2. Due to safety, we plan to replace all deck boards including the gangway/walkway to the boathouse as many of the boards are loose and rotten. We will also replace barrels that are needed under walkway and decking to ensure proper floatation for the structure. We will also replace the screen door on the door closest to the land due to deteriorating materials from age and weather factors.

The above proposal will not change the boathouse in any way including size.
