MEMORANDUM

To: Board of Public Works
From: Derek Greebon – Water Superintendent
Date: 10/27/2025
Subject: Pressure Reducer Valve Placement

The Water Utility has completed several studies to evaluate the optimal use of existing water production facilities and to assess system pressures within the booster station region of La Crosse. Based on these findings, it is recommended that two pressure-reducing valves (PRVs) be installed at strategic locations within the distribution system: one at the intersection of Old Town Hall Road and Robil Court, and another near the intersection of Old Town Hall Road and Laurel Road. These valves will help regulate the naturally high-water pressures caused by the area's lower elevation and will also mitigate rapid pressure fluctuations associated with normal water production operations.

Valve Option
